SOCIAL WELFARE
INSTITUTION
Botanical garden
“Ioulia and
Alexandros
N. Diomidis”

Photo: Ignatiadis Christos

The Botanical Garden "IOULIA and ALEXANDROS N. DIOMIDIS" is a Social Welfare Institution administered by a five-member board in which – according to Diomidis' testament - the Rector of the National and Kapodistrian University of Athens presides. The members of the Board of Directors are the current professor of Botany at the University of Athens, the President of the board of the National Bank of Greece, the President of the Supreme Court and the Director of the Management of National Legacies at the Hellenic Treasury. The institute is financially self-ruling having its income mainly from the investments of Diomidis' property.

The Garden (186 hectares) is covered by natural ecotypes. Among them, there is the oldest pine forest in Attiki, mainly composed of *Pinus halepensis*, *Pistacia lentiscus* and *Quercus coccifera*. The type of vegetation called "phrygana" (seasonally dimorphic shrubs) occupies a wide region and is dominated by *Sarcopoterium spinosum*, *Cistus* spp., *Thymbra capitata*, *Phlomis fruticosa*, *Euphorbia acanthothamnus*. The spontaneous flora of the garden lists a total of over 550 taxa. Approximately 11% (about 20 hectares) of the total Botanical Garden area has been used to form the typical botanical garden hosting 3500 plant taxa. Besides hosting a natural and cultivated vegetation of high diversity, the garden has evolved to a natural habitat and an ideal refuge for the local fauna protected against human disturbances. Eventually, a well-elaborated and particularly stable food web has been established. Undoubtedly, the presence of the garden aesthetically improves the surrounding urban area being an isle of "breath" and "tranquility" for the western part of the Athens metropolitan area while, simultaneously, offers an educational field for institutes of primary/secondary education and a research field for the Faculty of Biology and the School of Pharmacy, of the National and Kapodistrian University of Athens and the Agricultural University.

The staff of the Garden is experienced and of high scientific background on conservation and reproduction of rare, threatened and endemic plant species of the Hellenic flora. More than 19,000 dried plant specimens are preserved at the Herbarium, some of them originating from Hellenic areas protected by the "NATURA 2000" project.

An important contribution of the Botanical Garden is the "sensitization" of the public to environmental subjects such as the conservation of the environment, the protection of rare and endangered species etc. This is mainly accomplished through organized guiding tours in the garden area, which are held daily. Numerous educational institutes (primary schools, high schools, technological schools etc) have taken part in the Environmental Programs that have been created by the scientific staff of the garden.

General Information

Year of foundation: 1952 (open to the public since 1975)

Area: 186 hectares

Situation: The garden is situated 3 km inland, 14 km west of the city center of Athens, at the area Dafni of Attiki (longitude: 23° 40' E, latitude: 38° 05' N)

Altitude: 100-250m (100-170m in cultivated area)

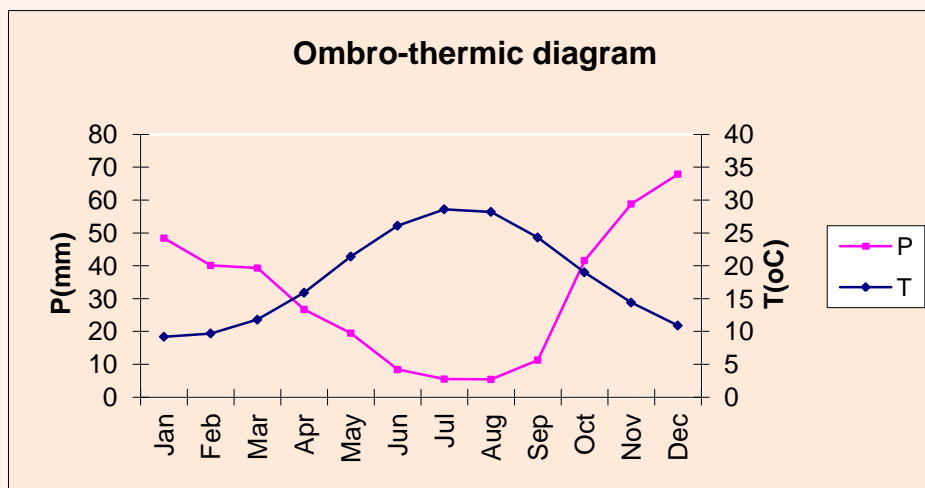

Soil: pH higher than 7.0

Climate: Absolute min. temp. (1972-1995): - 4,5 °C (9.2.76)

Absolute max. temp. (1972-1995): + 45 °C (27.7.87)

Lowest relative humidity (1972-1995): 41% (17.5.72)

(The climate data above refer to the Botanical Garden itself and not to the surrounding area)

The ombro-thermic diagram of the area according to climate data originated from the Meteorological Station of Elefsina (longitude: 23° 33' E, latitude: 38° 04' N, period: 1958-1997).

Explanation of the accessions

The series of numbers appearing in the first column is the IPEN-number. All plant material supplied by an IPEN member, should be accompanied by an IPEN-number that remains connected with that material and its derivatives of all the upcoming generations. Through this number, it is possible to trace back where and under which conditions the plant material entered the IPEN.

The IPEN number is consisted of the following four elements:

1. Abbreviation of the country from which the material is originated, according to an international standardized Country Code List obtainable by BGCI-Botanic Garden Conservation International. The abbreviations used in this seed list are the following :

ISO country code		
AT = Austria	CY = Cyprus	KR = Republic of Korea
BE = Belgium	DE = Germany	LU = Luxembourg
BR = Brazil	GR = Greece (Hellas)	NL = Netherlands
BG = Bulgaria	IT = Italy	NP = Nepal
CA = Canada	KG = Kyrgyz Republic	TR = Turkey

2. **Restrictions of transfer** ("1" if a restriction exists, "0" if no restriction exists).

3. **Garden Code from which the IPEN number is originated:**

A Garden Code is provided to every newly registered IPEN member. The list of the Garden Codes is referred to the BGCI website. The code for Botanical Garden "IOULIA and ALEXANDROS N. DIOMIDIS" is ATHD.

4. The **Identification number** is consisted of two elements: the year of seed or spores collection and the accession number. The abbreviations appearing in the third column stand for the status of the plants from which the spores or seeds had been collected, as well as the area of the collection:

Cult.= seeds of cultivated plants

Cult.*= seeds of cultivated plants belonging to an indigenous taxon in Greece

Cult.^o = seeds of cultivated plants belonging to a spontaneous xenophytic taxon in Greece

Spont.= seeds of spontaneous plants

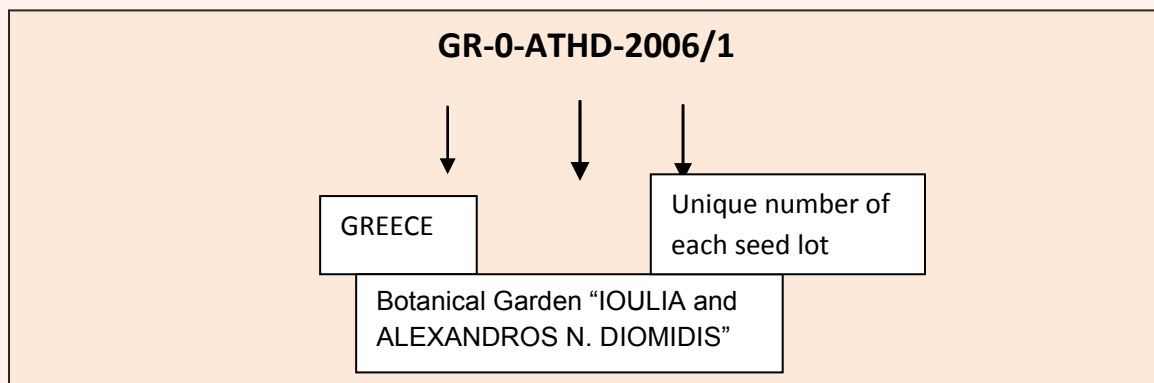

Subspont.= seeds of subspontaneous plants

Spont.^o = seeds of a spontaneous xenophytic taxon in Greece

Subspont.^o = seeds of a spontaneous xenophytic taxon in Greece

Spont.² = seeds collected by students of two primary schools. Department of the Educational Network "Seed, the fountain of life"

ATHD= Botanical Garden "IOULIA and ALEXANDROS N. DIOMIDIS"

Collections

Every seed lot is collected by employees of the Botanic Garden, supervised by Dr. I. Vallianatou, S. Porevis & I. Papanikolaou.

The Botanical Garden is collaborating with the "Lavrio Center for Environmental Education" through the Educational Network "Seed, the fountain of life". Two secondary schools (2nd high-school of Lavrion and 4th of Virona) spent a day collecting seeds in the Sounion National Park and Imittos mountain respectively, under our guidance. The collected seeds are now kept in the Seed Bank, as a department of the network. These seeds are included in this seed list and marked below.

Taxonomy & Nomenclature

Taxonomy and nomenclature are based largely on the following:

- Davis, P. H. (ed.) (1965-1988). Flora of Turkey and the East Aegean Islands 1-10. Edinburg University Press.
- Dimopoulos, P. & al. (2013). Vascular Plants of Greece: An annotated checklist.-Berlin: Botanischer Garten und Botanisches Museum Berlin-Dahlem; Athens: Hellenic Botanical Society [Englera 31].
- Greuter, W., Burdet, H. M. & Long, G. (eds.) (1984,1986,1989). Med-checklist. Vois. 1,3,4. Genève & Berlin.
- Hodel, D. R. (2014). *Washingtonia x filibusta* (Aceraceae:Coryphoideae), a new hybrid from cultivation. *Phytoneuron*. 68:1-7. Published 1 July 2014. ISSN 2153 733x
- Strid, A. & Tan, K. (eds.) (1997). Flora Hellenica 1. Koeltz Scientific Books. Koningstein.

Citation of plant material

If a scientific publication is a result of the use of material provided by the Botanical Garden "Ioulia and Alexandros N. Diomidis", please cite the garden as the source of the material and send us a copy of the scientific publication.

Ordering seeds/spores

Please enter the fourth element (identification number) of the IPEN number of the seeds/spores required in the desiderata form. For example, if you wish to order seeds of the species *Cunninghamia lanceolata*

Lamb., which is accompanied by the IPEN-number "XX-0-ATHD-**2006/1**", all you need to do is to write the number **2006/1** (shown in bold) in one of the boxes in the desiderata form (only one number per box).

Please, limit your requests to **25 items**. You may also include up to 5 items as substitutes.

Requests will be accepted until **31 May 2016** via ordinary mail, e-mail or fax and processed on a first-come, first-serve basis according to the date received (until the available supply is exhausted). We will only accept requests from Research Institutes, Universities and Botanic Gardens.

The desiderata form is enclosed on the last page.

We would like to point out that the spores and the seeds listed below are the result of open pollination.

If you wish to ask for any information about the habitat of any of the collections, please contact us at uoabotgd@otenet.gr.

DESIDERATA 2015

You may include up to 5 substitutes:

--	--	--	--	--

Your full postal address:

In response to the International Convention on Biological Diversity (Rio de Janeiro 1992), Botanic Gardens have to comply with article 15 (access to genetic resources), especially concerning the exchange of plant material only to those who use it in the sense of the Convention on Biological Diversity thus on the condition that:

1. Plant material and its products are just used for environmental purposes, with no commercial background in the areas of research, species conservation, education and development of Botanic Gardens.
2. The genetic material provided, its products or research derived from it must not be commercialized, neither by our exchange partners nor by a third party, without written permission from Botanical Garden "IOULIA and ALEXANDROS N. DIOMIDIS".

By requesting seeds from the Botanical Garden "IOULIA and ALEXANDROS N. DIOMIDIS", you confirm to accept these conditions.
